

Bulletproof Electronics

ARSE Keyless Ignition

- V-Twin Expo's 2006 Accessory of the Year!
- Eliminate the need for an ignition switch.
- Brings the bike to life when only you sit on the bike to start it. A credit card-sized transponder carried in your pocket activates the ARSE, freeing the ignition to start!
- Hands free operation, just get on your bike and ride.
- Prevents lost keys, codes, locks and stress.
- Unique identification code has millions of combinations and virtually no chance of drive-off theft.
- Prevents keys from scratching paint.
- No ignitions or wiring fried while washing your bike.
- Works alone or with optional motorcycle light controller for battery savings with seamless operation.

Complete Light Controller

- Eliminates all electronic control modules currently used by manufacturers, including starter relay.
- Simplifies wiring of motorcycle saving space, time and money.
- Self canceling turn signals also act as emergency flashers.
- Includes rear turn signals that also act as brake lights.
- Includes brake light driver. Brake light flashes three times before steady state to caution motorists behind the bike.
- Battery saver feature kills lights when starter button is pressed, turns them back on when released, provides more power for starter motors on big bore high compression engines. Reduces starter replacements and increases battery life.
- Emergency flasher implemented by pressing left and right turn signals simultaneously and cancelled by pressing them simultaneously again.
- Includes hi/lo beam controller.
- Stand alone operation or will work in conjunction with A.R.S.E.
